

Home Organization Checklist: BEDROOMS

- Declutter by removing everything from the floor, surfaces, cabinets, drawers, shelves, and other areas. Get rid of anything you don't want or need.
- Put away anything that doesn't belong in the bedroom.
- Baskets are an excellent way to create homes for all the items you want to keep in the bedroom. They look great, and provide excellent storage for clothing, shoes, linens, blankets, toys, and more. Amazon and IKEA have tons of options for attractive storage baskets to match any bedroom decor.
- When looking for bedroom storage, don't forget to look up. Floating shelves near the ceiling can be a perfect place to store books, boxes of paper clutter, plants, and more.
- If you need more storage space that doesn't take up floor space, consider a headboard with built-in shelving. This is a great option for a small space — the headboard shelves can replace nightstands.
- Another easy way to add extra storage in a small bedroom is to use a small bookcase or dresser in place of a bedside table.
- While a full-length mirror is a bedroom essential, try turning it into an extra organization tool by building in a compartment for jewelry, makeup, or accessories.
- Take advantage of space in the corners of the room (even above furniture pieces) with floating corner shelves.
- Get creative with shoe storage, using wall shelves, a shoe organizer, a shoe caddy, a repurposed bookshelf or cabinet, or a DIY lazy Susan for a creative shoe rack.
- Keep dresser drawers organized and clutter-free by rolling clothes instead of folding them, or using honeycomb organizers and dividers to keep everything neat and visible inside.
